

Micro Hot Boxes

Micro Boxes are the latest insulation innovation from Proteus, available in various sizes made to measure. These portable units are heated with dual 750W electric elements and can be powered by a 2.2kva generator or run through a 16A supply when on site.

They also feature thermostatically controlled heating with digital temperature readout, and we can make various capacities to suit the customer's requirements.

The main advantage of these Micro Boxes is that, when used in conjunction with a static or large mobile Hot Box, they can completely negate the need to use costly cold lay materials for small scale reinstatement jobs.

The ability to use hot asphalt for these jobs will potentially save companies vast amounts of money, since they will no longer have to make return visits at a later date and can get the job done first time.

The Traffic Management Act regulations will make first-time reinstatement even more important, since customers can potentially incur fines from using temporary cold lay and then returning to the job at a later date.

Please call for prices or have a look at the additional resources in our website customer area.
